

随着预可行性研究工作的继续，澳大利亚钒提取测试工作显示出积极的结果

Australian Vanadium Ltd's (ASX:AVL) 持续进行的工作台和中试规模的最新测试结果表明，该产品硅石和氧化铝含量低且高于预期的钒品级。

根据 2019 年 12 月的预可行性研究（PFS），该公司的目标浓缩物质量为 1.4% 五氧化二钒且二氧化硅含量低于 2%。

结果较为乐观，平均产生浓度等级为 1.44% 的五氧化二钒，具有 1.37% 的二氧化硅含量。

这项试验工作正在逐步改善焙烧/浸出试验工作，该试验工作将于 9 月在美国一家实验室开始。

Australian Vanadium extraction test work shows positive results as DFS work continues

[Australian Vanadium Ltd's \(ASX:AVL\)](#) latest results from ongoing bench and pilot-scale test work indicates higher than anticipated vanadium grades with low silica and alumina content.

As per the December 2019 pre-feasibility study (PFS), the company's target concentrate quality is 1.4% vanadium pentoxide with less than 2% silica.

Positively, the weighted average of the results produced a concentrate grade of 1.44% vanadium pentoxide with a 1.37% silica content.

The test work is providing incremental improvements in the lead up to the roast/leach pilot work due to commence in September at a US-based laboratory.
